

Customer Conversational Interface — Complete

This document tells you exactly what to build, how to build it, and — equally important — what not to build. Read it completely before writing a single line of code. Every decision here was made deliberately based on six years of operational experience serving the Kenyan diaspora.

Part 1 of 2

WhatsApp-First

Mobile-First

No Customer Portal

Zero Forms

Under 60 Seconds

00 — CONTEXT

Read This Before Anything Else

Mkono Global serves the Kenyan diaspora — Kenyan people living in the USA, UK, and Canada who need tasks executed back home in Kenya. Groceries bought. School fees paid. Medical errands handled. Gifts delivered to family.

These are busy professionals in a different timezone. They have been let down before by informal arrangements. They do not want to learn a new app. They do not want to create an account. They do not want a dashboard.

They want to send a message and receive proof that the job was done.

They already live on WhatsApp. Every single one of them. WhatsApp is where they talk to their family in Kenya. It is where they coordinate everything important. Mkono Global does not compete with that habit. It joins it.

THE SINGLE MOST IMPORTANT DECISION IN THIS ENTIRE PROJECT

WhatsApp is the customer interface. The website exists only to start the conversation.

This decision is already made. It is not up for discussion. Every technical choice you make in Part 1 must serve this principle.

01 — SCOPE

What You Are Building

You are building two things. Nothing else belongs in Part 1.

THING 1

A simple website

Introduces Mkono Global and starts a conversation. One page.
Three sections. One button.

THING 2

A WhatsApp handoff

When the customer taps a mission card, WhatsApp opens with a pre-filled message. That is where the conversation happens.

YOUR JOB ENDS HERE

Your responsibility in Part 1 ends the moment WhatsApp opens and the customer presses Send. Everything after that — order creation, documents, execution, proof — is handled by the internal team using the OMS (Order Management System), which is Part 2. You do not build Part 2.

Structure — Three Sections Only

Purpose: Get the customer from landing on the page to sending a WhatsApp message in under 60 seconds.

Technology: Plain HTML, CSS, JavaScript. No framework required. Mobile-first — design for 390px screen width. Must load in under 2 seconds on a 4G connection. No heavy images, no video backgrounds, no unnecessary libraries.

SECTION 1 — THE HOOK

The customer lands here. They must understand what Mkono Global does within **5 seconds**.

Headline: "What needs to get done back home?"

Subline: "Tell us. We handle it. We send you proof."

Single button: [Start a Mission]

No paragraphs. No about us section. No testimonials. No team photos. No competing calls to action. One button. That is it. Trust is built in the next step — not here.

SECTION 2 — MISSION SELECTOR

When the customer clicks Start a Mission, they see a grid of mission cards. Large. Visual. Simple labels.

The customer taps **one card**. That is the only input the website ever asks for.

Do not ask for anything else here. No forms. No fields. No name. No email. Nothing.

 Support Education	 Handle a Medical Need	 Household Support	 Medication Delivery
 Property & Construction	 Send a Gift	 Government Errands	 Something Else

SECTION 3 — WHATSAPP HANDOFF

When the customer taps a mission card, WhatsApp opens **immediately** with a pre-filled message.

The customer did not type that message. The website generated it automatically from the card they tapped.

Each mission card has its own pre-filled template. The structure is the same. Only the mission name changes.

Pre-Filled Message — Final Version

This is the exact message that appears in WhatsApp when the customer taps a mission card. It was designed through careful deliberation. Do not change the structure without approval.

Why no greeting? "Hi Mkono Global" sounds like a cold email to a stranger. The customer gets straight to what matters. The warmth comes from the Mkono Global team's reply — not the template.

PRE-FILLED WHATSAPP MESSAGE — HOUSEHOLD SUPPORT EXAMPLE

I need help with: Household Support

Your name:

Beneficiary name:

Beneficiary phone:

Beneficiary location:

What I need done:

(Type here, or send a photo, voice note, PDF or screenshot — whatever works for you)

HOW TO BUILD THE WHATSAPP DEEP LINK

Use the wa.me deep link format. Replace spaces with %20 and line breaks with %0A.

WhatsApp Business number (USA — Primary): +1 555 854 0662

Kenya number: +1 555 854 0662

Each mission card gets its own link with its own pre-filled template. The mission name at the top changes per card. The five fields below stay the same across all missions except institution-specific missions like Education and Medical — add a field for School / Hospital name on those.

EXAMPLE — HOUSEHOLD SUPPORT DEEP LINK STRUCTURE

```
https://wa.me/15558540662?text=I%20need%20help%20with%3A%20Household%20Support%0A%0A// blank line
Your%20name%3A%0A
Beneficiary%20name%3A%0A
Beneficiary%20phone%3A%0A
Beneficiary%20location%3A%0A
%0A// blank line
What%20I%20need%20done%3A%0A
(Type%20here%2C%20or%20send%20a%20photo%2C%20voice%20note%2C%20PDF%20or%20screenshot)
```

Pre-Filled Message Variations Per Mission Card

Each mission card generates a slightly different pre-filled message. The structure is the same across all missions. The mission name at the top changes. Some missions add one extra field relevant to that mission type. Build one template per card.

SUPPORT EDUCATION

I need help with: Support Education

Your name:

Beneficiary name:

Beneficiary phone:

Beneficiary location:

School / Institution name:

What I need done:

(Type here, or send a photo, voice note, PDF or screenshot – whatever works for you)

HANDLE A MEDICAL NEED

I need help with: Handle a Medical Need

Your name:

Beneficiary name:

Beneficiary phone:

Beneficiary location:

Hospital / Clinic name (if known):

What I need done:

(Type here, or send a photo, voice note, PDF or screenshot – whatever works for you)

SOMETHING ELSE

I need help with something.

Your name:

Beneficiary name:

Beneficiary phone:

Beneficiary location:

What I need done:

(Type here, or send a photo, voice note, PDF or screenshot – whatever works for you)

ALL OTHER MISSIONS

Household Support, Medication Delivery, Property & Construction, Send a Gift, and Government Errands all use the standard five-field template shown in Section 03. No additional fields needed for these missions. The Mkono Global team will ask follow-up questions naturally if anything specific is required.

What the Customer Can Send on WhatsApp

Once the conversation starts, the customer can send anything. Your code does not need to handle or parse any of this. It all goes into the Mkono Global WhatsApp Business inbox and the team handles it manually.

You need to understand this list so you do not accidentally design anything that restricts it.

TEXT MESSAGES

In English, Swahili, or both. Any length.

VOICE NOTES

Many diaspora clients prefer to speak rather than type.

PHOTOS

Shopping lists written by hand. Items they want sourced.

SCREENSHOTS

From previous orders, from family messages, from online stores.

PDFS

School fee statements, medical reports, receipts.

DOCUMENTS

Any document they have that explains what they need.

VIDEOS

If needed to show something that cannot be photographed clearly.

HANDWRITTEN NOTES

Photographed and sent. Completely acceptable.

CORE PHILOSOPHY

No restrictions. No parsing. No structured input required from the customer.

The customer explains in whatever way is natural to them. Mkono Global organises. The website's job ends the moment WhatsApp opens.

What the Mkono Global team Collects Through Natural Conversation

The pre-filled template collects the minimum required to start an order. Everything else is collected by the Mkono Global team through short, natural follow-up questions — one question at a time, never as a list, never as a form disguised as conversation.

The rule: the Mkono Global team only asks what the first message did not already provide. Many customers will volunteer additional information naturally without being asked.

Information Needed

Relationship to beneficiary
Appears on delivery note so beneficiary knows who cares about them

Client's country
Affects time zone, payment method guidance, communication timing

Deadline or specific date
Standard execution is within 3 days.
Some orders have a specific date.

Best time to reach beneficiary
For delivery orders where Mkono Global needs to coordinate with the beneficiary

Payment
Execution only begins after payment is confirmed

Institution details
For Education and Medical missions — school name, hospital name, account details

How the Mkono Global team Asks — Naturally

"Just so the delivery note feels personal — how does [beneficiary name] know you? For example, your mother, brother, church elder, colleague."
Only asked once. Answer goes directly on the delivery note.

Often comes naturally in conversation. If not: "Which country are you messaging from?"
the Mkono Global team can also infer from the WhatsApp number country code.

"Is there a specific date you need this done by, or is our standard 3-day window fine?"
Only asked if not already mentioned in the first message.

"What is the best time to reach [beneficiary name] on [phone number]?"
Only asked for delivery orders, not for payments or store collections.

Not a question. the Mkono Global team sends the invoice and payment details after confirming the order. Message: "We will review your request, prepare an invoice, and send it together with payment details shortly."
Payment methods accepted: Sendwave, Remitly, Western Union, Bank Transfer. Customer uses whichever they already trust.

"Which school / hospital should we pay, and do you have the account details or fee statement?"
Often already provided in the first message for these mission types.

CRITICAL RULE FOR THE MKONO GLOBAL TEAM — ONE QUESTION AT A TIME

the Mkono Global team must never send a list of questions in one message. That feels like a form. It breaks the conversational feel that Mkono Global has deliberately designed.

Wrong: "Can you share the beneficiary's location, your country, the deadline, and how they know you?"

Right: Ask the single most important missing piece. Wait for the answer. Then ask the next one if needed.

What You Must Not Build

This section is as important as everything above it. These decisions were made deliberately. Do not add these features even if they seem helpful.

✗ A customer login or account system

The diaspora client will not create an account to get help for their family. Every extra step loses them.

✗ A customer dashboard or order tracking page

Updates happen through WhatsApp. That is where the customer is. A dashboard adds a system they need to check.

✗ A form that collects name, phone, or email before opening WhatsApp

This is registration disguised as a form. The diaspora client closes the tab. The conversation never starts.

✗ A chatbot or automated response system

Mkono Global's value is human accountability. An automated reply destroys that trust before the relationship begins.

✗ Any screen between the mission card and WhatsApp opening

No loading screens. No confirmation popups. No "you are about to open WhatsApp" warnings. Tap card → WhatsApp opens. Instant.

✗ A payment gateway or payment collection on the website

Payment happens after the Mkono Global team confirms the order through WhatsApp. Customers use Sendwave, Remitly, Western Union, or bank transfer — whichever they already trust.

THE REASON BEHIND ALL OF THESE

Every additional step between the customer and the WhatsApp conversation is a step where they drop off. The diaspora client will not fill a form. They will not create an account. They will close the tab and send a message to a cousin instead. **Simplicity is the product.**

The Beneficiary Is a Different Person

The **client** is the diaspora customer in the USA, UK, or Canada who contacts Mkono Global and pays for the order.

The **beneficiary** is the person in Kenya who receives the delivery, collection, or service. They are different people. They communicate with Mkono Global differently. They never visit the website.

CLIENT — DIASPORA

Website → WhatsApp

Contacts via website → WhatsApp. Receives invoice PDF and completion letter PDF. Updates through WhatsApp.

BENEFICIARY — KENYA

WhatsApp + Phone only

Receives WhatsApp message from +1 555 854 0662. Sometimes a phone call. Receives Delivery Note PDF. Shares Google Maps PIN when needed.

The website does not serve the beneficiary. They never visit it. Do not design for them in Part 1.

Brand, Colours & Technical Standards

PRIMARY COLOUR — NAVY

#0A2D56

Headers, backgrounds, primary text headings

ACCENT COLOUR — GOLD

#C8A84E

Highlights, buttons, accents, the MG logo ring

FONT

Inter

Google Fonts. All weights. Used throughout all Mkono Global documents.

tone

Professional & Warm

Never corporate and cold. Never casual and unprofessional. Accountable.

SCREEN TARGET

390px first

Mobile-first. Design for a phone screen. Desktop is secondary.

LOAD TIME

Under 2 seconds

4G connection. No heavy images. No video backgrounds. No unnecessary libraries.

WHATSAPP — ALL COMMUNICATIONS

+1 555 854 0662

Single number for clients, beneficiaries, and all Mkono Global operations. Use this in all wa.me deep links.

The MG Logo — Use Exactly As Specified

Navy circle background #0A2D56. Gold outer ring #C8A84E stroke-width 2.5. Gold wireframe globe lines. Bold gold MG centered. ViewBox 0 0 56 56. Never transparent. Never change the colours. Resize only by changing width and height — never the viewBox.

MG LOGO SVG — COPY EXACTLY. DO NOT MODIFY.

```
<svg width="56" height="56" viewBox="0 0 56 56" xmlns="http://www.w3.org/2000/svg">
  <circle cx="28" cy="28" r="27" fill="#0A2D56"/>
  <circle cx="28" cy="28" r="25.5" fill="none" stroke="#C8A84E" stroke-width="2.5"/>
  <circle cx="28" cy="28" r="18" fill="none" stroke="#C8A84E" stroke-width="0.8" opacity="0.5"/>
  <ellipse cx="28" cy="28" rx="18" ry="8" fill="none" stroke="#C8A84E" stroke-width="0.7"
opacity="0.4"/>
  <line x1="10" y1="28" x2="46" y2="28" stroke="#C8A84E" stroke-width="0.7" opacity="0.4"/>
  <ellipse cx="28" cy="28" rx="8" ry="18" fill="none" stroke="#C8A84E" stroke-width="0.7"
opacity="0.4"/>
  <text x="28" y="33" text-anchor="middle" font-family="Inter,Arial,sans-serif"
font-size="16" font-weight="900" fill="#C8A84E" letter-spacing="1">MG</text>
</svg>
```

Step by Step — Start to Finish

1 Customer lands on the website

They read one headline: "What needs to get done back home?" They see one button: Start a Mission. Nothing else demands their attention.

2 Customer taps Start a Mission

The mission grid appears. Eight cards. Large icons. Simple labels. The customer taps one.

3 WhatsApp opens automatically

The pre-filled message appears. Mission selected at the top. Five fields below. A note at the bottom explaining they can send a photo, voice note, PDF or screenshot — whatever works for them. The customer did not type any of this. The website generated it.

4 Customer fills in what they know and presses Send

They type their name. The beneficiary's name and phone. Location. What they need done. Or they skip typing and attach a photo, voice note, or PDF. Whatever is easiest for them.

5 Your job is done

The message is now in the Mkono Global WhatsApp Business inbox. the Mkono Global team reads it. She creates a new order in the OMS. She follows up with one natural question if anything important is missing. The customer never interacts with any software beyond WhatsApp and the PDFs they receive.

10 — DEFINITION OF SUCCESS

What Good Looks Like

PART 1 IS COMPLETE WHEN THIS HAPPENS

1

Lands

Reads one line in 5 seconds

2

Taps

One mission card

3

Opens

WhatsApp with pre-filled message

4

Sends

Their details naturally

5

Done

Under 60 seconds total

They never created an account. They never filled a form. They never learned a new system. They just sent a WhatsApp message — exactly like they do every day — and Mkono Global took it from there.

The Universal Workflow Behind Every Order

You are building the entry point into a workflow that has been operating and proven across more than 500 orders since 2020. Understanding this workflow helps you make better technical decisions in Part 1 — even though you are only building the first step.

Every single order at Mkono Global — regardless of mission — follows this exact sequence:

- M Mission**
The customer identifies what needs to get done. This happens through WhatsApp — the entry point you are building. The mission is captured in the pre-filled message template.
- E Execution**
The Mkono Global team on the ground executes the task. Groceries sourced. School fees paid. Medical errand handled. Standard execution window is three days. Some orders have a specific deadline.
- V Verification**
Every payment is verified against the recipient before a single shilling moves. Every item is checked before it is handed over. Zero misdirected payments across all orders to date.
- P Proof**
Photos, receipts, WhatsApp confirmations, and delivery notes are collected and sent to the client. Not a message that it was done. Evidence that it was done.
- C Completion**
The order is marked complete. A completion letter is sent to the client. The case file is closed with full documentation.

WHY THIS MATTERS FOR YOUR BUILD

The website and WhatsApp handoff you are building is the entry point to Mission. Everything after that is handled by the internal OMS in Part 2. Your code sets the tone for the entire experience. A slow website, a broken link, or a confusing mission selector breaks trust before the relationship even begins. Build it to the standard the rest of the workflow operates at.

Most Clients Will Never Visit the Website Again

The website serves one purpose: start the first conversation. After that, the client has the Mkono Global WhatsApp number saved in their phone. For every subsequent order they message directly — they never return to the website.

This is by design. It is not a problem to solve. It is a sign that the system is working.

Do not build any mechanism to push repeat clients back to the website. Do not add a "place another order" button to any document or PDF. The WhatsApp number on every invoice, delivery note, and completion letter is the return path for repeat clients.

FIRST-TIME CLIENT

Website → WhatsApp

Discovers Mkono Global, taps a mission card, starts the conversation.

REPEAT CLIENT

WhatsApp directly

Already has the number. Messages directly. Never needs the website again.

How Payment Works — Not Your Responsibility to Build

Payment is not handled by the website. It is handled through WhatsApp conversation after the Mkono Global team confirms the order and sends the invoice. You do not build a payment gateway. You do not integrate with any payment provider.

This is important context because you must not accidentally design anything on the website that implies payment happens there — no "pay now" buttons, no pricing pages, no payment forms.

PAYMENT METHODS ACCEPTED — FOR YOUR CONTEXT ONLY

Customers use whichever payment method they already trust. The Mkono Global team sends payment details through WhatsApp after confirming the order.

Sendwave — Send to M-Pesa +1 555 854 0662

Remitly — Bank account details shared by the team

Western Union — Receiver details shared by the team

Bank Transfer — Account details shared by the team

The customer pays using whichever of these they have used before. They send a screenshot of the confirmation. The Mkono Global team confirms receipt. Execution begins.

15 — TECHNICAL NOTES

Additional Notes For The Developer

WEBSITE LANGUAGE

English only

The diaspora client communicates in English. WhatsApp conversations can be in Swahili or English — the website does not need to be bilingual.

WA.ME LINKS

Plain anchor tags

WhatsApp deep links work as plain HTML anchor tags. No JavaScript required to open WhatsApp. href="https://wa.me/..." is sufficient.

EXECUTION WINDOW

3 days standard

Standard execution is within three days of payment confirmation. This can be mentioned on the website to set honest expectations. Never promise same-day.

NO ANALYTICS REQUIRED

Version 1

Do not add Google Analytics or any tracking in Version 1. Keep the page clean and fast. Analytics can be added later once the website is live.

NO COOKIE BANNERS

Version 1

No cookies are being set. No tracking. No cookie consent banner needed. Keep it simple.

OPEN GRAPH TAGS

Include these

Add og:title, og:description, og:image so the website previews correctly when shared on WhatsApp itself. Use the MG logo as the og:image.

Your Job Is Done When the Message Is Sent

Part 1 ends the moment the customer presses Send on WhatsApp. Everything after that — order creation, execution, documents, evidence, proof, completion — is handled by the Mkono Global team using the internal OMS.

Part 2 — the OMS — is a separate document, a separate build, and a separate brief. The customer never sees it. Your responsibility in Part 1 is complete.

WHAT COMES NEXT — COVERED IN PART 2

Part 2 is the internal Order Management System — the execution engine the Mkono Global team uses every day to turn WhatsApp conversations into professionally executed missions with verified proof. That is a separate document. The customer never sees it. Your job in Part 1 is done when the WhatsApp message is sent.
